NLEP – Annual Report for the year 2015-16

I. EPIDEMIOLOGICAL STATUS

Status in the Country

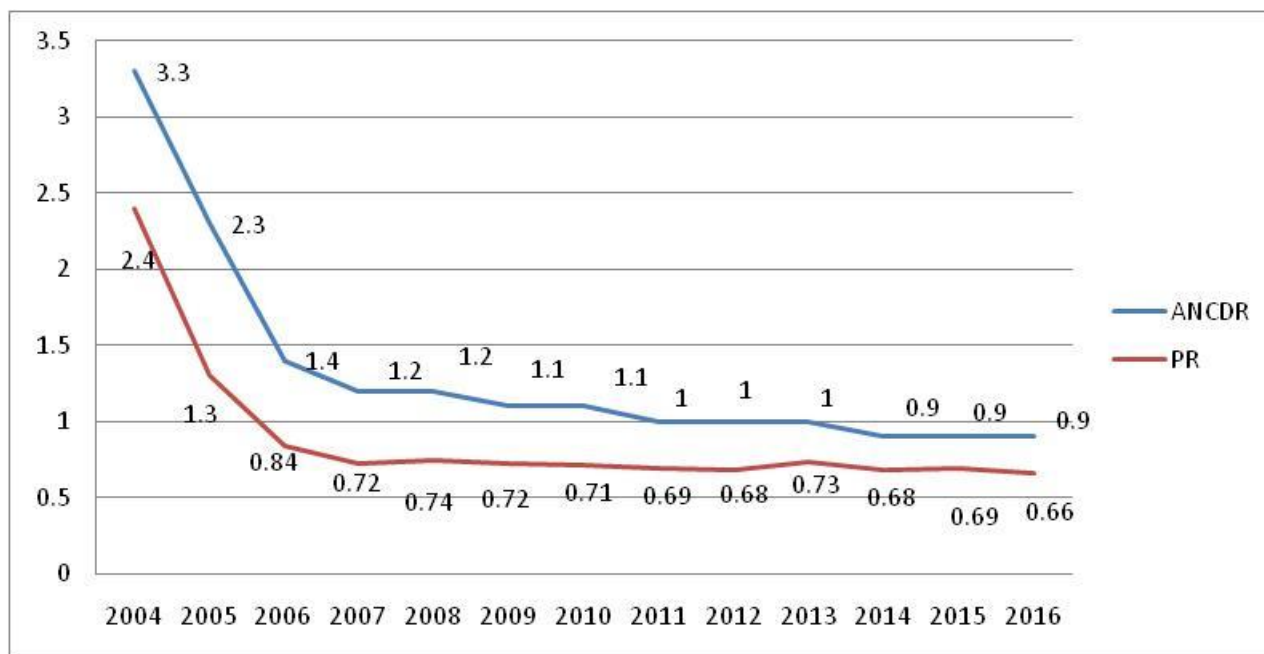

The year 2015-16 started with 0.88 lakh leprosy cases on record as on 1st April 2015, with PR 0.69/10,000. Till then 34 States/ UTs had attained the level of leprosy elimination. 551 districts (82.36%) out of total 669 districts also achieved elimination by March 2016.

A total of 163 high endemic districts (which reported Prevalence rate >1/10,000 population in any of the last three years) across 20 states/UTs were identified for conducting Leprosy Case Detection Campaign. During the year 2015-16 also, Special activities with house to house survey was the main strategy along with IEC and capacity building of the workers and volunteers. These activities were carried out in the high endemic blocks of low endemic districts along with the blocks of high endemic districts.

Based on the reports received from all the States and UTs for the year of 2015 -16 (**Annexure -I**), current leprosy situation in the country is as below:

1. A total of 127334 new cases were detected during the year 2015-16, which gives Annual New Case Detection Rate (ANCDR) of 9.71 per 100,000 population, as against 125785 cases in 2014-15.
2. A total of 86028 leprosy cases are on record as on 1st April 2016, giving a Prevalence Rate (PR) of 0.66 per 10,000 population, as against 88833 cases in 1st April 2015.
3. Detailed information on new leprosy cases detected during 2015-16 indicates the proportion of MB (51.27%), Female (38.33%), Child (8.94%), Grade II Deformity (4.60%), ST cases (18.79%) and SC cases (18.57%).
4. A total of 5851 Gr. II disability detected amongst the New Leprosy Cases during 2015-16, indicating the Gr. II Disability Rate of 4.46 / million population (**Annexure-II**).
5. A total of 11389 child cases were recorded, indicating the Child Case rate of 8.94% (**Annexure-III**).

6. Trend of leprosy Prevalence (PR) and Annual New Case Detection (ANCDR) are indicated in the graph below:

Note: The increase in new cases and prevalence during 2012-13 was attributable to the NLEP strategy to carry out extensive house to house survey for new case detection and to treat them with MDT to cut down the transmission potential in the future. In 2015-16, ANCDR has shown a static trend inspite of the extensive surveys carried out, covering both high and low endemic districts.
